- 8.. The NPV method is based on the assumption that projects' cash flows are reinvested at the project's risk-adjusted cost of capital.
9. The higher a firm's cost of capital, k_0 , the higher the total valuation of the firm.
10. Capital structure determines the least expensive sources of funds for the firm to borrow.

Q1. B Match the column (any 7) (7)

	Column A		Column B
1	Objective of Strategic Financial Management	A	Ratio between Present Value of Cash Inflow and Present Value of Cash Outflow
2	ABC Analysis	B	Profit Maximisation
3	Net Present Value	C	Fixed Income bearing Security
4	Debentures	D	Maximise Return of Investment
5	Short Term Objective of firm	E	Dividend Capitalisation
6	Gordon Dividend Model	F	Present Value of Cash Inflow less Present Value of Cash Outflow
7	Profitability Index	G	Dividend not relevant for shareholders wealth
8	Modigliani Miller Dividend Model	H	Capital Structure does not affect value of the firm
9	Collection Cost	I	Debtors Control Technique
10	Net Operating Income Approach	J	Cost of collecting dues

Q2

A limited company is considering the purchase of a new machine which will replace some operations There are two alternatives A and B. From the following information, prepare a profitability statement and work out the payback period for each. Also calculate the net present value of both the alternatives if the cost of capital is 8% p.a.

Particulars	Model A	Model B
Cost of the Machine in Rs	5,00,000	6,00,000
Estimated life in years	5	6
Additional cost in Indirect Materials in Rs	8,000	9,000
Estimated Savings in scrap in Rs	50,000	60,000
Additional cost of maintenance in Rs	15,000	20,000
Estimated savings in Direct wages Employees not required	15	20
Wages per employee p a in Rs	10,000 p.a	8,000 p.a

Tax rate is 40% suggest which machine should be preferred.
